

## Summary of performance against KPIs

\*improvement priority

The infographic summarises the national position of services against audit key performance indicators (KPIs) and demonstrates variation in service provision across England and Wales. Since NACAP's [first organisational audit of adult asthma and COPD services](#)<sup>3</sup> in 2019:

- > the provision of specialist respiratory review 7 days a week continues to vary
- > a higher percentage of services have a designated clinical lead in place for asthma and COPD
- > a higher percentage of services have at least one formal transition arrangement in place for young people with asthma (**41.1%** compared to **30%**)
- > a higher percentage provide access to severe asthma services
- > one-third of services (**32.7%**) hold a weekly MDT meeting, compared to **48.6%** in 2019
- > less than half of services (**42.1%**) offer access to pulmonary rehabilitation (PR) services within 30

days of discharge for patients with COPD, compared to **45%** in 2019.

Six services met all six KPIs, demonstrating that they are achievable. These services should share the factors that enabled their success. In order to meet KPIs, all services should use the guidance available to them in this report and further [support on the NACAP website](#), including good practice repositories with case studies from services delivering [adult asthma](#) and [COPD](#) care. The challenge of managing the COVID-19 pandemic has been considerable for respiratory and other services, and is likely to have impacted improvements in care and contributed to the variation in resources and organisation demonstrated in this report. COVID continues to affect services and it is key that teams have the capacity and adequate contingencies to continue to deliver high quality care in this phase of the pandemic, in line with national standards and NACAP KPIs.
