

# National Early Inflammatory Autoimmune Diseases Audit (NEIAA) State of the Nation Summary Report 2025 Infographic

## NEIAA recruitment rates for EIA continue to improve post-pandemic

Recruitment rates are the highest we have seen since the audit started.

## Treatment timeliness for early inflammatory arthritis is improving

## Patients report significant impact on mental and physical health at diagnosis

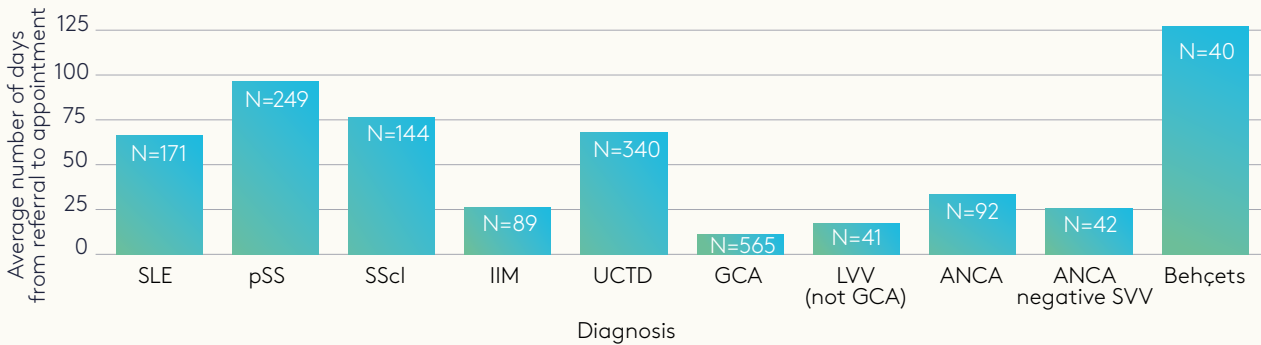

of patients demonstrate high anxiety and depression scores at baseline

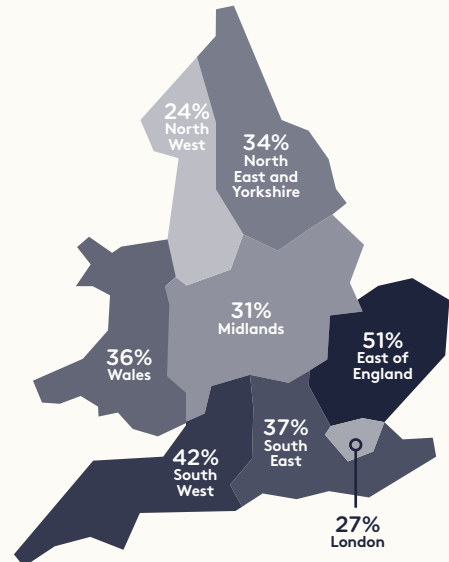

of patients had moderate to severe musculoskeletal symptoms with a MSK-HQ\* of less than 35

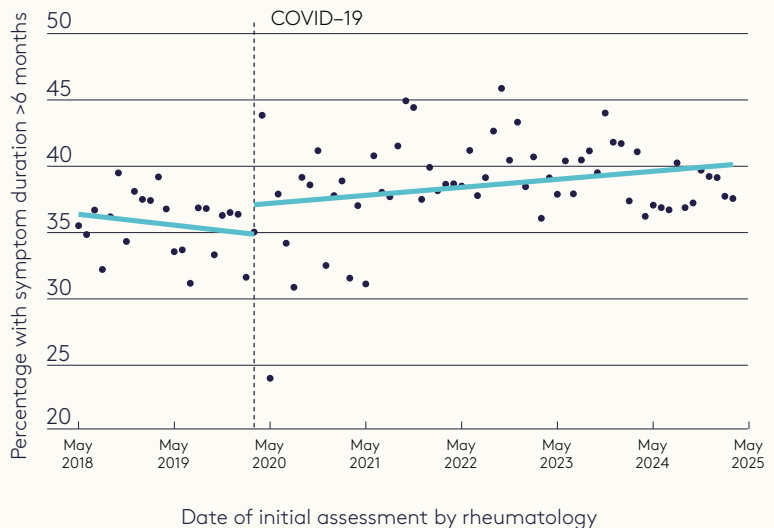

## Waiting times for RAIRDs are highly variable (see list of diagnoses)

## Overall remission rates at 3 months remain static at 34% but this disguises significant geographic variation

## Following the COVID-19 pandemic, patients with EIA have longer symptom durations at diagnosis

\*MSK-HQ: Musculoskeletal Health Questionnaire. A tool used to assess the impact of musculoskeletal conditions on a person's health and well-being.
